

TRANSFER FOIL INSTRUCTIONS

1. Starting with a dry nail, brush on adhesive lightly and evenly.
2. Allow adhesive to dry completely. (It will brush on milky & turn clear but remain tacky). DO NOT TOUCH ADHESIVE AFTER IT HAS DRIED.
3. Cut Foil to desired length, press onto nail (shiny or pattern side up), rub firmly over entire surface of Foil piece.
4. Gently peel back clear acetate backing and apply Top Coat to entire nail.

HELPFUL HINT: When applying Top Coat DO NOT drag brush repeatedly over the nail. Apply in one stroke and allow to dry completely before apply more Top Coat to add any nail gems or other enhancements. Transfer Foil may be used to cover entire nail or only portions. When covering entire nail it is not necessary to polish nail with color first. Use Transfer foil Adhesive sparingly and allow to dry completely before applying Transfer Foil.
